

## Study on treatment of neck pain in chiropractic practice in Denmark

This questionnaire include questions about:

- Typical treatment modalities used in the clinic
- Considerations about choice of treatment modality
- Personal and demographic information

Do you currently work in a clinic or have you, during the last year, had clinical work with assesment and treatment of neck pain patients (including part-time)?

(1) ☐ Yes

(2) ☐ No

### Part 1:

In this part of the questionnaire, you will be presented with different treatment modalities and we will ask you to answer how often you use the different modalities in your work with **treatment of patients with neck pain**. This applies to all treatment modalities you have, but also if you refer patients to other health care providers for this form of treatment.

## 1.8 Do you use other treatment modalities than those previously listed?

Remember that we ask regarding neck pain patients!

- (1) ☐ Yes (please elaborate) \_\_\_\_\_
- (3) ☐ No

## Part 2:

In this next part, you will be presented with two short baseline cases. We will ask you to decide which groups of treatment modalities you will use in each case. We are thinking about a typical treatment course, not just at first visit.

Next up you will be presented with different additional findings / information and we will ask you to decide whether or not these could get you to change your treatment strategy

### Case 1 (acute)

A 39-year-old man addresses you with emerging local neck pain through 2 days, occurred with no known cause. There are no other musculoskeletal complaints. He has no other health problems now or earlier. There are no red flags. He exercise regularly and seems to be in good shape both physically and mentally. There is no physical function limitation at work or at home. No previous neck pain.

Objectively you find local pain and restricted movement of the neck.

There is no immediate indication for X-rays.

### 2.1 How would you treat this patient?
